For the second year running, the Yale School of Architecture has partnered with NeighborWorks New Horizons and HTP Ventures LLC with the aim of producing affordable housing from a chosen student's design. Yale Students are challenged to create a cost-efficient and flexible design prototype that could be applied to sites in New Haven and other urban areas across the country.

The programme is focused on designing and constructing low-cost homes in economically distressed neighbourhoods in New Haven, Connecticut. The brief was focused on a 1,000 square foot house to be located on a corner lot in New Haven's West River neighbourhood.

The two-storey house is clad in red cedar and is topped with a pitched roof made of galvanised aluminium. "The pitched roof was a contextually sensitive response to the traditional New England gable roof," said the school.

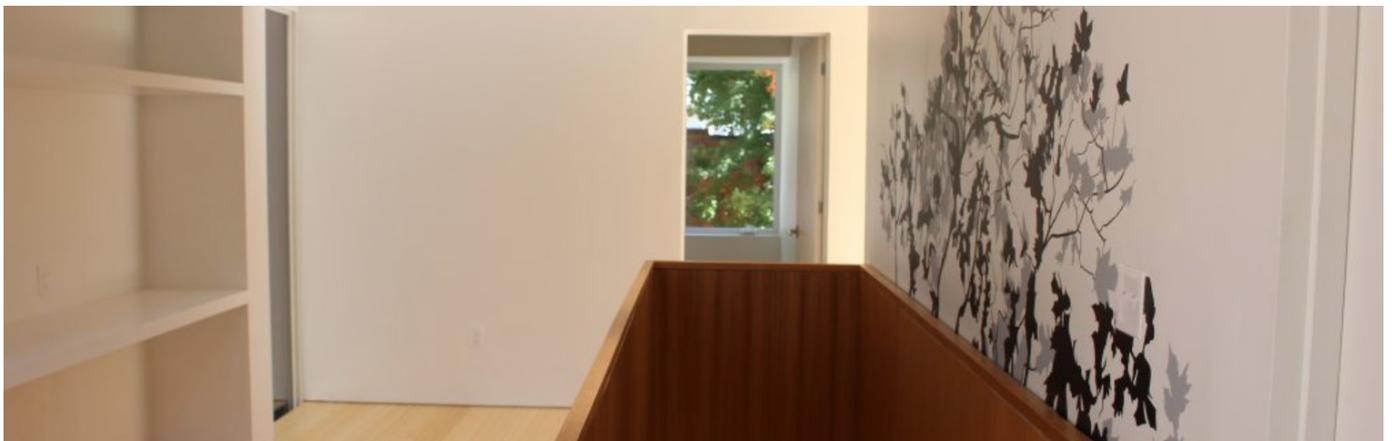

Studco® was committed to support this project by supplying the EzyJamb® system. The clean modern lines of the students design were the perfect alignment for the flush finishes that EzyJamb provides.

To be able to contribute to a development that supports one of the most prestigious education organizations in the country is a real privilege.
